

VIKRANT THENGE

Operations Excellence & Analytics Leader | Business Performance | KPI Governance | Forecasting | Operational Intelligence

+919930244221 | Vikrantthenge@outlook.com | linkedin.com/in/vthenge/ | Mumbai | github.com/Vikrantthenge/vikrant-portfolio

SUMMARY

- Operations Excellence and Analytics leader with 20 years of experience driving operational performance, forecasting, KPI governance, and decision support across complex aviation environments.
- Delivered ₹1.5 Cr+ cost recovery, improved forecasting accuracy by **20–25%**, automated **40–50%** of reporting workflows, and enabled 500+ daily operational decisions through analytics-driven performance improvement initiatives.
- Experienced in business performance management, operational intelligence, capacity planning, process optimization, and cross-functional stakeholder leadership. Combines deep operational expertise with analytics, AI-enabled decision support, and continuous improvement practices to improve business performance, service reliability, and operational efficiency.

SKILLS

Operations Excellence & Performance

Business Performance Management | KPI Governance | Operational Intelligence | Forecasting & Planning | Capacity Planning | Process Improvement | Continuous Improvement | Cost Optimization | Risk Management

Analytics & Decision Support

Performance Analytics | Business Analytics | Forecasting Models | Scenario Planning | Business Intelligence | Dashboard Development | Reporting Automation | Root Cause Analysis

Tools & Technology

Power BI | Excel | Python | AWS | Docker | Generative AI

Domain Expertise

Aviation Operations (20 Years) | Flight Dispatch & Regulations (FAA Licensed) | Network Operations | Supply Chain & Logistics Operations Analytics | High-Volume Operations Management

WORK EXPERIENCE

Operations Analytics Lead

Sep 2022 - Present

Operational Intelligence Consulting

📍 Remote/Mumbai

- Architected 7 integrated analytics and decision-support platforms, enabling 500+ daily operational decisions and improving decision-making speed by **25%** through KPI governance and operational intelligence frameworks.
- Delivered ₹1.5 Cr+ cost recovery by identifying operational inefficiencies, conducting root-cause analysis, and implementing performance improvement initiatives across a 50+ aircraft network.
- Improved forecasting accuracy by **20–25%** by developing forecasting models, scenario planning frameworks, and performance monitoring dashboards for operational leadership.
- Established KPI governance and performance management frameworks, reducing escalation cycles by **25%** and strengthening accountability across cross-functional teams.
- Automated **40–50%** of manual reporting activities, reducing reporting turnaround time and improving operational visibility for network leadership.
- Enabled capacity planning, schedule reliability tracking, and performance optimization through analytics-driven decision-support frameworks.
- Partnered with operations, finance, and service delivery stakeholders to align KPI frameworks, forecasting processes, and performance improvement initiatives across network operations.

Station Operations Manager

Nov 2023 - Jun 2024

Uganda Airlines

📍 Mumbai

- Reduced financial and compliance risk by ₹40-50 lakh through operational audits, reconciliation reviews, and strengthened monitoring controls.
- Improved issue-resolution efficiency through workflow redesign, structured escalation processes, and enhanced stakeholder coordination.
- Leveraged operational reporting and performance analytics to identify service gaps and improve operational effectiveness.
- Strengthened compliance governance by implementing standardized monitoring, audit controls, and risk-management processes.

Flight Operations Supervisor

Jul 2019 - Aug 2022

All Nippon Airways

📍 Chennai/Mumbai

- Improved on-time performance by **30%** through optimization of turnaround processes, operational coordination, and KPI-driven performance management.
- Reduced reporting cycle time by **25%** by redesigning reporting frameworks and improving visibility into operational performance metrics.
- Accelerated decision-making by 10% through implementation of KPI tracking systems and operational performance dashboards.
- Improved schedule reliability through trend analysis, root-cause investigation, and continuous improvement initiatives.
- Collaborated with cross-functional stakeholders to minimize operational disruptions and maintain service excellence.

Flight Operations Officer

Dec 2016 - Jun 2019

Garuda Indonesia Airways

📍 Mumbai

- Improved operational efficiency by **25%** through workforce planning, succession planning, and process optimization initiatives.
- Reduced disruption recovery time by 3 months through strengthened escalation management, operational continuity planning, and stakeholder coordination.
- Improved operational visibility by integrating performance data from multiple operational sources, enabling faster issue identification and resolution.
- Identified operational bottlenecks through performance analysis, supporting scalable service delivery and continuous improvement initiatives.

Early Career – Airline Operations & Travel Administration

May 2004 - Sep 2015

Cathay Pacific (CNS Services) | Saudi Arabian Airlines | Alepo Technologies

- Progressively advanced through operational, customer service, and travel administration roles supporting high-volume airline and travel operations.
- Developed foundational expertise in operational coordination, stakeholder management, service delivery, schedule management, customer operations, and process execution across international aviation environments.

ANALYTICS PROJECTS

Enterprise Operations Analytics & Decision Support Platform

Objective:

Provide operational leadership with real-time visibility into network performance, KPI tracking, forecasting, and decision-making.

Approach:

Designed and deployed 7 integrated analytics platforms combining operational reporting, KPI governance, forecasting models, and performance dashboards. Partnered with stakeholders to define business requirements and decision-support workflows.

Tools:

Power BI | Excel | Analytics Dashboards | KPI Frameworks | Forecasting Models

Outcome:

Enabled 500+ daily operational decisions, improved decision-making speed by 25%, and strengthened performance management across network and station operations.

AI-Powered Operations Intelligence Assistant

Objective:

Explore the application of Generative AI for operational analytics, aviation safety intelligence, and executive decision support.

Approach:

Built a local AI-powered operational intelligence assistant using Ollama, Docker, Open WebUI, and aviation safety datasets. Developed prompt-engineering workflows for operational risk analysis, KPI assessment, executive summarization, and performance reporting.

Tools:

Generative AI | Ollama | Open WebUI | Docker | Prompt Engineering | Local LLM Deployment

Outcome:

Generated AI-assisted operational intelligence reports, identified recurring safety and operational risk patterns, and demonstrated practical applications of AI for performance management and operational decision support.

CERTIFICATION

FAA Flight Dispatch License

Data Science & Analytics

AWS Cloud Practitioner

EDUCATION

BSc – Computer Science

North East Frontier Technical University
